Successful outcomes begin with a precise ‘Start’

The precision of the 3M™ Incognito™ Appliance System relies on the brackets being placed in the correct spot on the tooth. The Incognito System team has developed a proprietary way to build the indirect bonding tray using the same digital data created for designing the brackets. The result is accurate placement of the brackets.

Less deviation from correct bracket position

Graphs illustrate the deviations of bracket positioning using the stated method as compared to the design data. The Incognito Clear Precision Tray method is significantly more accurate.

Scan and analysis tools were used to determine deviations of brackets from their target positions.
What Doctors Are Saying

- Perfect, sits very well, big step forward.
- It is more precise than previously used silicone tray. It gives the best visibility during the bonding procedure, 100% complete seating in the dentition, easy to remove after bonding procedure.
- It has an excellent fit, it was very easy to use and very easy to handle for the assistants.

3M™ Incognito™ Clear Precision Tray

The Incognito Brackets are inserted into the Incognito Clear Precision Tray that is manufactured directly from digital data.

**Note:** With the new technology, the custom designed bracket surfaces are not covered by any additional resin base, so a filled resin material is recommended for bonding (See RelyX™ Unicem 2 Cement information below).

![Image of Incognito Clear Precision Tray]

The Incognito Clear Precision Tray combines a hard outer shell with a soft inlay manufactured directly from digital data.

**Rebonding “Jig”**
Tray can be cut and used for accurately replacing brackets.

Brackets are inserted into tray.

3M™ RelyX™ Unicem 2 Automix Self-Adhesive Resin Cement

- Can be used for both bonding and re-bonding of Incognito brackets “Jig”
- Testers experienced a reduced bond failure rate leading to fewer unplanned visits in your office and a seamless treatment
- Provides easy handling in a proven automix syringe and is moisture tolerant
- No need to use metal primer
